What if I need internet access?

Most wireless companies offer a straight-forward and easy way to create a 'hotspot' that will allow you to access the internet. You can typically access via your 'settings' and then choose 'mobile hotspot' or 'tether'. Once you've activated the hotspot, you can then connect your device to that hotspot network using your system's password.

Please refer to specific guidance on the Mark Twain website: <http://www.twain.cps.edu/>
